STANDARD FUEL INJECTORS

- Application-specific and precision-engineered to the original vehicle manufacturers' specifications for a perfect fit and performance.
- Coil is made with high quality insulated copper wire to prevent electrical shorts.
- Internal components are made from stainless steel, eliminating possible damage from rust such as flaking and nozzle clogging. This insures a proper spray pattern and reliable delivery of the exact amount of fuel.
- STANDARD Fuel Injectors have the same fine spray patterns as originally specified, allowing for optimum engine performance and fuel economy.
