

JUST THE FACTS

Three Truths About Reman Fuel Injectors

1 Fuel injector components are permanently assembled

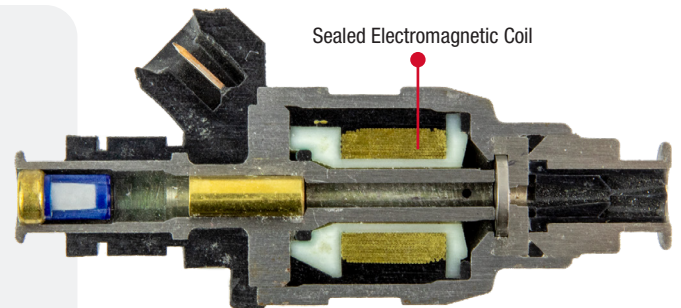

The mechanical and electrical components of a fuel injector are welded together before being sealed inside the plastic overmold.

Inlet Assembly (inside of injector housing)

2 "Reman" fuel injectors use old electrical components

All electrical and mechanical components are sealed inside the overmold. They are not accessible and cannot be replaced.

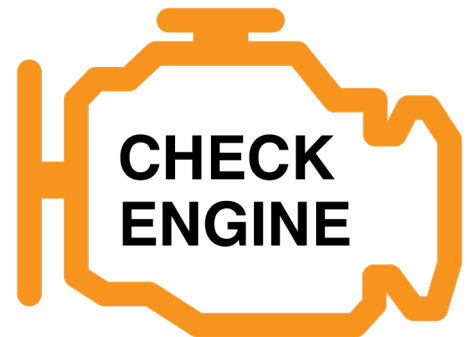

Fuel Injector Cutaway

3 "Reman" fuel injectors are a myth

Fuel injectors cannot be remanufactured, they can only be flushed and cleaned.

Remanufactured injectors are unreliable and can cause misfires and engine damage.

Did You Know

Failure in the electrical components is one of the leading causes of fuel injector problems.

Remanufactured injectors exclusively use the original electrical components which can have unknown miles and thousands of heat cycles on them.
