ACTIVE GRILLE SHUTTERS

Many vehicle manufacturers use active grille shutters to help improve fuel economy and range while also helping to better control operating temperatures. Active grille shutters can be found on gasoline, hybrid and electric vehicles. They are easily damaged in collisions and can even be damaged by snow and ice.

Open: Air flows into the radiator for cooling

Closed: Air flows over the vehicle, improving efficiency

Standard® Active Grille Shutters are precision-engineered, direct-fit replacements that are tested and validated for performance and durability. Standard® offers coverage for millions of import and domestic vehicles.

All Standard® Active Grille Shutters include a new actuator, but sometimes, only an actuator is required. Standard® also offers Active Grille Shutter Actuators which can be installed quickly to help optimize performance, cooling and efficiency.
